

How to read the growth dashboard

uncleachoo.github.io/growth-dashboard/?beta — a 2-minute guide. Read it top to bottom: people, then companies.

The boxes at the top of the dashboard show this funnel. Click any step to open its charts below.

1. Pick a time frame (top right)

Last week	Weekly check-in: what moved since last week.
Last 4 weeks	Default. The trend, without weekly noise.
Q3 to date	Fiscal quarter so far (Q3 = Aug–Oct; Q1 starts Feb 1).
Fiscal YTD	Since Feb 1. No comparison — there is no prior-year data.

Headlines use **complete Mon–Sun weeks**. The week in progress appears separately as "Week to date". Green / red arrows compare with the same stretch of time just before.

3. Reading tips

- **Hover a headline number** (dotted underline) for a one-line, plain-English read.
- **"X still open"** = signups too recent to judge yet. They are left out of the rate, not counted as misses.
- **Striped or faded bars** and cells = still in progress.
- **"All cohorts" / "To date" chips** = that card ignores the time frame.
- **Click bars, table rows or heat-map cells** to see the people or companies behind them.

2. What the numbers mean

Website visitors	GA4 engaged sessions — real visits, not bot-inflated raw traffic.
Sign up	A person joining a company workspace. Someone joining two companies counts twice. Mutiny staff excluded.
Activated	Sent (or drafted) a first email, or published an asset.
Returned	An activated user who comes back within 7 days and does something meaningful.
Channel	The signup's own answer to "How did you hear about us?" (asked since May 7, 2026). Invited / joining teammates are never asked.
Paying company	Self-serve customer billed in Stripe (MRR above \$0). Enterprise excluded — same rule as the revenue dashboard.
Retention	Share of companies still paying the month after they started (Month 1), by start month.
Credits used	Share of a billing cycle's credits a paying company actually used.

4. Read with care

- **Small numbers.** Company-level cards (paying, retention, "does activation predict paid") rest on dozens of companies — read them as direction, not precision.
- **Channels before May 7, 2026** are mostly blank — the question didn't exist yet.
- **Website traffic** drops sharply from Aug 2026 — being checked; possibly a GA4 tracking change. Compare visitors within, not across, that line.
- **Freshness:** "Data as of" in the header shows each source's latest day. Data refreshes when the growth team runs the update.
